

CHIE Records Review

Improvement to information shared by Southern Health to CHIE

Southern Health have shared community, children, and mental health records in CHIE for over five years. A real time view is available to all care partners using CHIE. The records include the following information depending on the patient:

- Demographics
- Referrals
- Discharges
- Appointments
- Allergies and adverse reactions
- Alerts
- Mental Health Act Status
- Inpatient Events
- Progress Notes
- Care plans
- Palliative care drug information and preferences/wishes
- Mental Health Risk Assessment
- Recent Assessments
- Child Immunisations, screening results, health reviews and birth details

Although this information is available to care partners using single sign on from their own EPRs it is recognised that a review of what is shared to ensure it is still appropriate, and creation of a summary view would make records quicker and easier to find.

A working group has been established to review and make recommendations for changes. Initial changes will be implemented by March 2023.
