

REDUCE CARBON STUDY

Randomised control trial to Understand whether prescribing Choice for inhalers is influenced by knowledge of the CARBON footprint

Did you know that the carbon footprint of inhalers across the NHS each year is equivalent to an area of deforestation twice the size of Hampshire!

There is an urgent need to address this and by taking part in the REDUCE-carbon study you can help us to explore how inhaler choices are made and specifically whether carbon footprint information changes prescribing recommendations.

It is a short online questionnaire that should take no more than 10 minutes to complete.

We know both prescribing and non-prescribing healthcare professionals have a major influence on inhaler choice and would encourage as many healthcare professionals as possible to take part.

If you would like to take part please either scan the QR code or use the following link (best accessed through google chrome):
