

# FREE TRAINING ON AIR POLLUTION AND ITS IMPACT ON PATIENTS

## Calling Southampton Healthcare Professionals!

### AIR POLLUTION

Air pollution is the **largest environmental health risk** to the public.

Long-term exposure can worsen or cause many chronic health conditions and reduce life expectancy. It causes up to 43,000 deaths in the UK each year.

### SOUTHAMPTON

Vulnerable patients in Southampton are particularly at risk of poor health from breathing dirty air.

### CLEAN AIR CHAMPIONS

The Environment Centre (tEC) is working with Global Action Plan to train healthcare staff as Clean Air Champions.

A Champion enhances their patients' health by **integrating air quality advice** into their **consultations**.

### WHAT'S INVOLVED?

You'll attend a **2-hour training session** (online or in-person) to increase your knowledge and skills so that you can confidently offer air quality advice to your patients.

You'll have access to **free resources** for your patients, and on-going support and learning opportunities through the Clean Air Champions Network.

### TRAINING DATES

12-2pm, Wed 17 April - online

9-11am, Tues 23 April -  
Southampton General Hospital

12-2pm, Wed 24 April -  
Adelaide Health Centre
